a true films (schematic)
SLD (10^{-6} Å^{-2})
depth below the surface z (Å)
air
Si
mid_oxide
mid_no_oxide
t2_low
b mid_oxide, one Poisson curve (models recomputed)
counts
Poisson counts (s = 10^6)
Poisson ML, d = 239.5 Å
best refine endpoint, d = 244.4 Å
(y − λ)/√λ
q (Å^{-1})
c profile likelihood of d, noise-free curves
Δχ² (Poisson deviance, noise-free)
Δχ² = 1
mid_oxide profile
mid_no_oxide profile
t2_low profile
local Fisher (CRLB) parabola
d − d_true (% of d_true), other parameters re-fitted
d fit endpoints: refine (open), Poisson LSQ (filled)
ΔD + 1 above the best fit
ΔD = 4
mid_oxide, refine
mid_oxide, Poisson LSQ
mid_no_oxide, refine
mid_no_oxide, Poisson LSQ
t2_low, refine
t2_low, Poisson LSQ
d of the endpoint − d_true (% of d_true)
